

# Christmas Tree & Garland Care

**O**ur trees are privately grown, not harvested from federal lands, and are grown for the sole purpose of being Christmas trees. You might say it's their horticultural destiny!

Nurtured for an average of six years through from transplant to harvest, each Christmas tree has an exceptional shape and color. We guarantee only the highest quality trees, and we carefully display them in water stands to maintain freshness. Every tree is cut within a week of delivery to our stores and then given a fresh cut again before going home with you.

## **Keep your Christmas Tree and wreath looking beautiful all season long with these care tips:**

- 1** Use a water stand and check the water level daily. Water should fill the stand almost to the top.  
Trees get thirsty!
- 2** Use an anti-transpirant on both trees and wreaths. It cuts down on water loss through the needles while your tree or wreath is in the warm, dry indoor environment. We carry a number of brands in our stores. If keeping your tree outdoors before bringing it indoors, be sure it's kept in a shaded location.
- 3** Always keep your tree or wreath away from sunny windows, heaters, and fireplaces.

**We'll help you grow the plants you love!**
